

Email Extractor is a web spider (PHP script) which crawls through the web and extracts e-mail addresses from webpages. You just have to enter start webpage URL, select crawling mode, set maximum number of URLs to crawl and launch a spider. It will walk around the web and collect e-mail addresses.

<https://veryutils.com/php-script-batch-send-emails>

Email Extractor Features:

- \* Start webpage URL: spider starts working with this page.
- \* 2 crawling modes: same domain URLs only and all URLs.
- \* Maximum number of URLs: spider can crawl limited and unlimited number of URLs.
- \* Crawling statistics: list of URLs, e-mails and error log.
- \* Clean code: clean PHP and JavaScript code can be used for study purposes.
- \* CURL and fsockopen supported: spider can work through either fsockopen or CURL.
- \* Portable and standalone PHP Script, without installation.

\* No database required.

Limitations:

- \* Spider doesn't extract e-mails from images.
- \* Spider doesn't extract e-mails from password protected area of websites.
- \* Some websites may block spiders.
- \* Make sure that using spiders is not against of your hosting provider TOS (TAC).

Requirements:

- \* PHP version 5.0 or greater.

How to use?

You can just run following command line to start the Email Crawler for a website easily,

```
".\php\php.exe" "crawl.php" url===https://www.website.com level===100
```

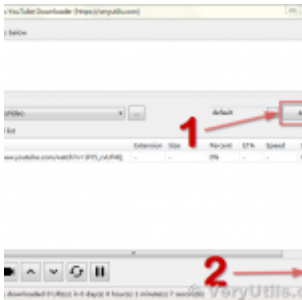

Enjoy!
