I have just two questions for VeryPDF DRM PDF Cloud API which list on following web page,

https://veryutils.com/cloud-docsafe-drm-pdf-protector
http://drm.verypdf.com/online/

1) What is the difference between the $39.95 and $59.95 per month solution?
2) Being not very technical can you explain whether your hosted Cloud solution can help automate the VeryPDF download to the buyer of the eBook upon receipt of payment, or can this only be done by the online store?

Customer

>>I have just two questions. 1) What is the difference between the $39.95 and $59.95 per month solution?

Thanks for your message, "VeryPDF DRM PDF Cloud API" is USD59.95 per month, we haven't another plan with USD$39.95 per month, could you please send to us the web page which

show the price of USD$39.95 per month? after I receive that web page URL from you, I will explain it to you asap.

>>2)Being not very technical can you explain whether your hosted Cloud solution can help automate the VeryPDF download to the buyer of the eBook upon receipt of payment, or can this only be done by the online store?

Thanks for your message, the workflow of "VeryPDF DRM PDF Cloud API" works like below,

1. Your customer purchases an eBook from your online store, you receive the money from the customer,

2. Your online store will call "VeryPDF DRM PDF Cloud API" to convert that eBook PDF file to a DRM protected PDF file, after encryption, your online store will download DRM protected PDF file to your local server, and then email that DRM protected PDF file and DRM PDF Reader to your customer, your customer will able to view that DRM protected PDF file easily on his Windows, Mac, iPhone and Android system.

Please find the options for VeryPDF DRM Cloud API on this web page,

http://drm.verypdf.com/verypdf-pdfdrm-cloud-api-include-c-curl-java-javascript-php-vb-net-examples/

You can use following simple PHP code to convert your eBook PDF file to a DRM protected PDF file, you can adjust these options to best meet your requirements,

```
<?php
//The Code
/* gets the data from a URL */
function get_data($url)
{
    $ch = curl_init();
    $timeout = 5;
```

```
    curl_setopt($ch, CURLOPT_URL, $url);
    curl_setopt($ch, CURLOPT_RETURNTRANSFER, 1);
    curl_setopt($ch, CURLOPT_CONNECTTIMEOUT, $timeout);
    $data = curl_exec($ch);
    curl_close($ch);
    return $data;
}
