

Normally, we need to print a photo in large size, which is larger than the "standard" A4 paper size of most printers. For example, if you print a high-resolution photo which taken from digital camera on a A4 paper, you may lack some details. Excellent digital photos can create beautiful wall posters, especially with the quality that can be captured by modern digital cameras and professional lenses. Such wall posters can impress any visitor, the most photo studios and printing centers will use some of them as part of the decoration.

However, poster printing is not the only reason we need paper larger than A4. It makes perfect sense that architectural design requires a larger printer, which is why such a plan is usually printed in a dedicated print studio, but other types of design work (such as Photoshop images) also require large paper. For example, hobbyists working in carpentry tend to transfer patterns from computers to wood for later carving or carving. Such transfer also requires large paper or at least many A4 pages.

### Methods Of Converting A Photo For Tiled Printing

There are many ways to convert large photos and you can print them on many A4 pages, you can later stick them together or let them overlap to display the entire photo. Using a specialized image editing software such as Photoshop, one can create such conversion in around 5 minutes, if he is at least a bit knowledgeable of how it works. But Photoshop is an expensive software and seems like an overkill if the only thing you want to do is this kind of conversion.

**VeryUtils** has a PhotoSlicer software for big poster printing, you may by following steps to use it,

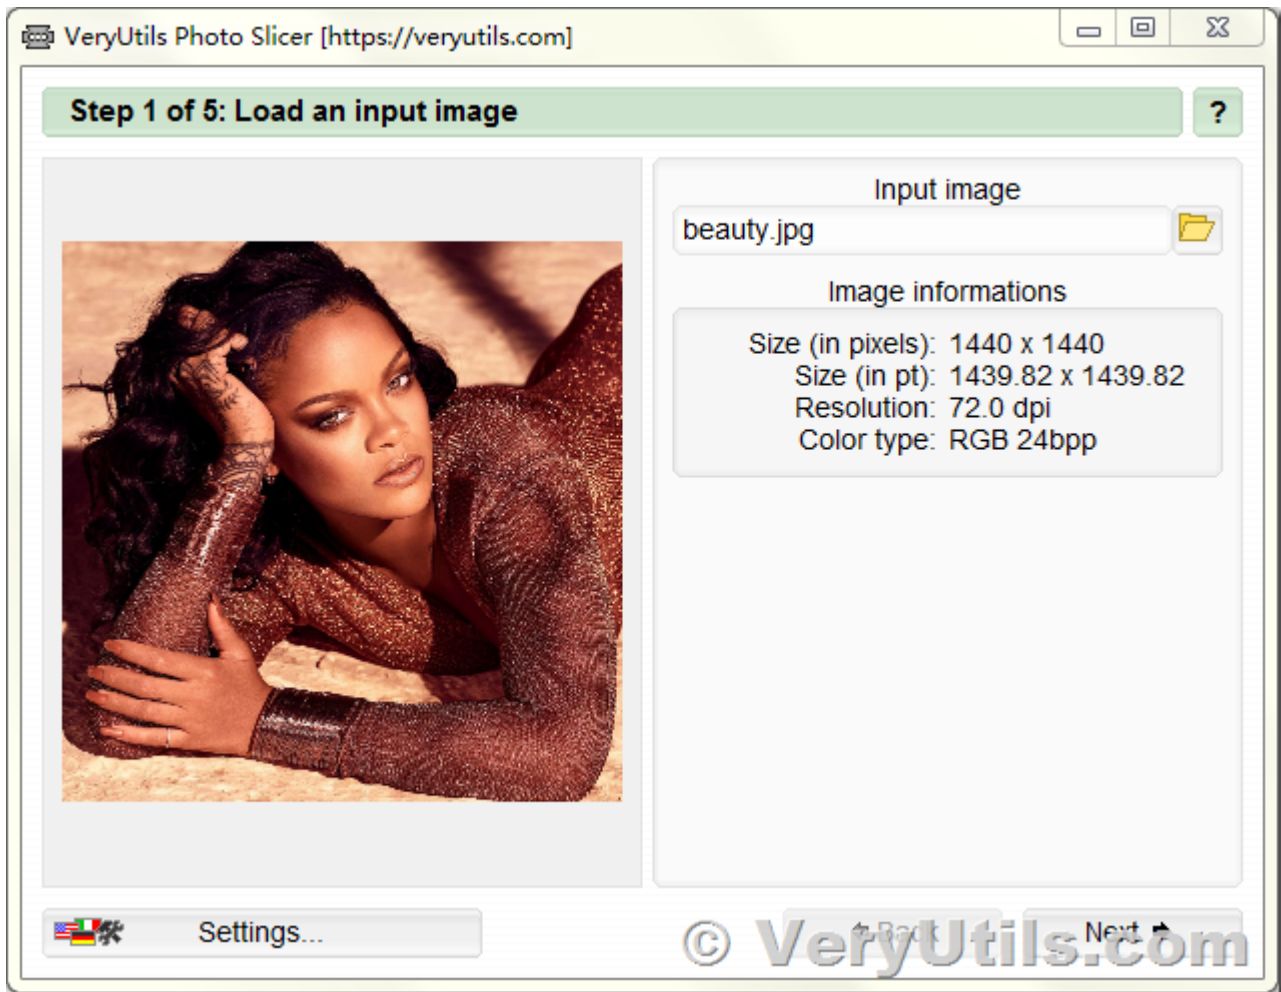

1. You may download and install PhotoSlicer software from this web page,

<https://veryutils.com/photoslicer>

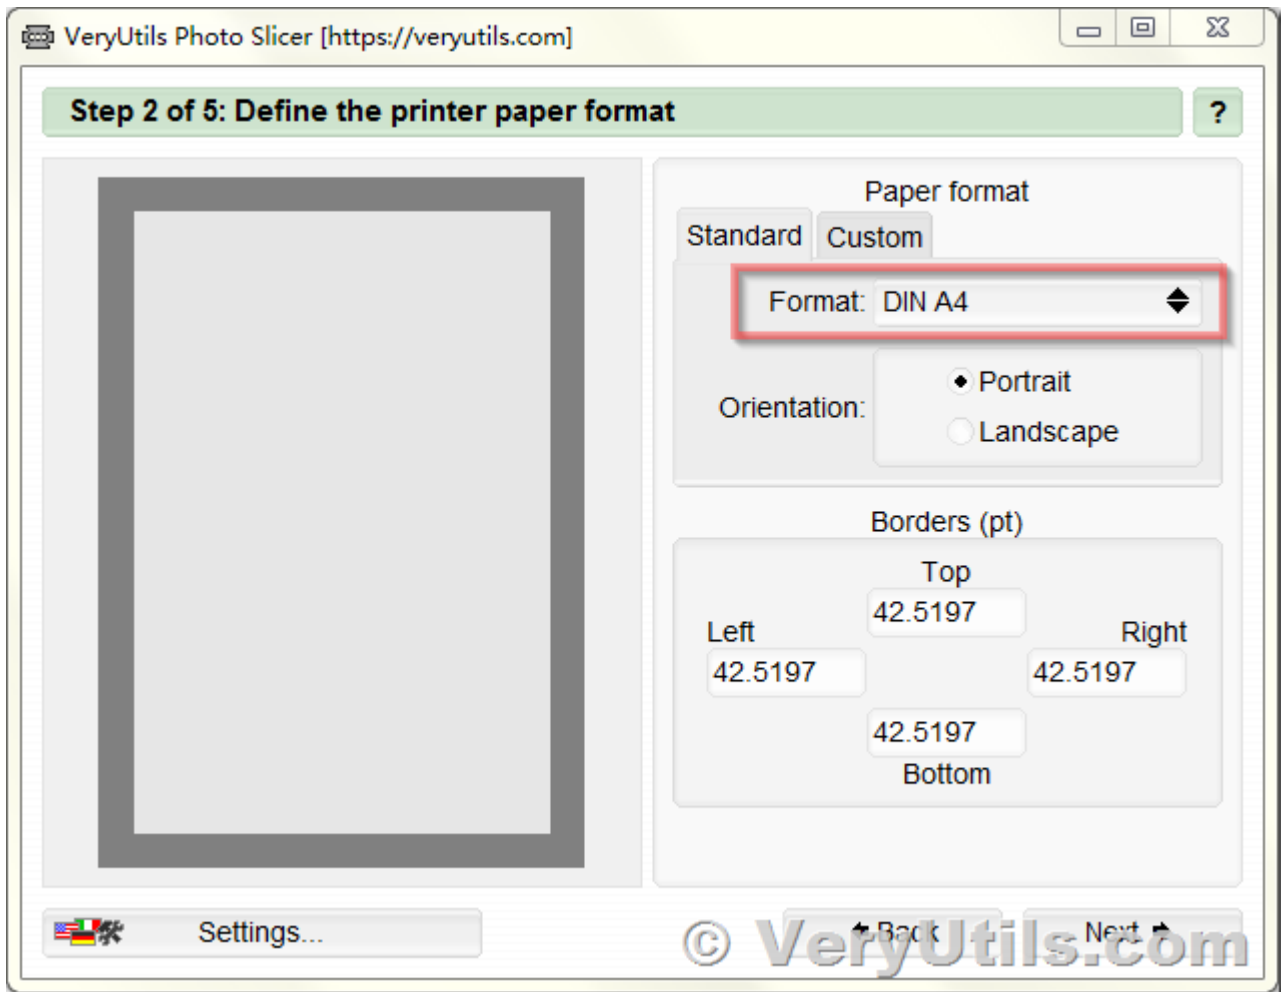

<https://veryutils.com/dl.php/VeryUtils-PhotoSlicer.exe>

2. After you install it, you may run it and open the large photo that you want to do the Tiled Printing,
