

Once the printer is hooked does the SDK have functions to retrieve the following information from the spooler?

- Printer Name
- Document Name
- Date
- # of Pages Printed color or B/W

Thanks,
Customer

Dear Customer,

Thank you for your inquiry. I'm glad to inform you that our HookPrinter SDK does indeed have functions to retrieve the following information from the spooler once the printer is hooked:

- Printer Name
- Document Name
- Date of printing
- Number of Pages Printed (both color and black & white)

To explore the capabilities of our HookPrinter SDK, I recommend downloading the trial version from the following web page:

HookPrinter SDK Trial Version

<https://veryutils.com/hookprinter-sdk>

Please note that the HookPrinter SDK can provide you with the total number of pages printed, but it does not differentiate between color and black & white pages. If you require separate counts for color and black & white pages, you will need to purchase the "VeryDOC Spool File Page Counter SDK" from the following web page:

VeryDOC Spool File Page Counter SDK

<https://www.verydoc.com/spool-page-count.html>

Please feel free to download and try the trial version of the HookPrinter SDK. If you have any further questions or require assistance, please do not hesitate to reach out to us. We are here to help.

Thank you for your interest in our products.

Best regards,

VeryUtils
