

With relentless news about security breaches, **file integrity monitoring** (FIM) software has become an essential tool for any organization. It helps to improve data security, which is very important for any company and cannot be ignored.

<https://veryutils.com/php-file-integrity-checker>

File Integrity Monitoring (FIM) is a basic security control measure that can be properly implemented to monitor and report any changes to the integrity of the system and configuration files. Maintaining integrity is key, because changes to files may indicate a malware infection.

Malware usually resides in executable files or has some way of triggering commands or code. The malware either embeds itself in an existing file or creates a new file that pretends to be a legitimate include file.

FILE INTEGRITY MONITORING

What is **file integrity monitoring**?

In contrast to other security measures, FIM solutions are specifically designed to monitor file changes. The software usually takes a "snapshot" of the system and then periodically compares it with the current state of the system. When it detects file changes that indicate unauthorized intrusion (such as sudden size changes or access by specific users), it can warn

IT or take measures to minimize the threat.

Use **file integrity checker** to detect malware threats

Malware and Advanced Persistent Threats (APT) often access and modify local files. File integrity monitoring software can easily detect APT, malware and improve FIM security.

Alert on unauthorized changes

Alerts whether unauthorized changes to sensitive files and registry settings are caused by attacks or change management errors.

PHP File Integrity Monitoring Software is written in PHP, after you buy it, you will get full PHP source code, you can run it on your Linux and Windows Servers to monitor all files on your server.

You may buy PHP File Integrity Monitoring Software from this web page,

<https://veryutils.com/php-file-integrity-checker>

```
- PuTTY
ls -l
total 10283
-rw-r--r--  1      users      10132 Jun 21 17:54 file-integrity-checker.php
-rw-r--r--  1      users 10440704 Jun 30 12:48 filehash.sqlite
-rw-r--r--  1      users      1232 Jun 21 15:58 list-files-to-db.sh
drwxr-xr-x  2      users         7 Jun 19 12:25 phpmailer
-rw-r--r--  1      users     10778 Jun 18 16:20 readme.txt
-rw-r--r--  1      users         44 Jun 20 05:44 verify-files.sh
© VeryUtils.com
```

The first, you can run following command lines to make a "snapshot" for the folders that you want to monitor,

```
php file-integrity-checker.php listfiles=1 folder=/usr/home/veryutils/app
```

```
php file-integrity-checker.php listfiles=1 folder=/usr/home/veryutils/blog  
php file-integrity-checker.php listfiles=1 folder=/usr/home/veryutils/demo
```

After that, you can run following command line to print a report for the monitored folders,

```
php file-integrity-checker.php verifyfiles=1
```

If some files be changed by malware, you will able to see "Change" information in the report easily.

PHP File Integrity Monitoring Software is written in PHP language, after you buy it, you can modify its source code easily, you can also run it on your Windows and Linux systems to monitor any folders periodically, if you have any question for this script, please feel free to let us know, we are glad to assist you asap.
