

Hi,

I'm searching virtual printer driver for our CNC machine.

The process is like below.

Design software(AI, Inkscape so on) -> print -> select virtual printer -> output EMF, SVG, PNG file in specific location -> automatically execute our software(create tool-path) -> transmit G-code to the our machine.

So the functions I need are like below,

- Virtual printer driver
- the driver is released with our software
- Support EMF, PNG, SVG file format
- Customize printer name
- Auto execute our software

Please let me know an estimate for the cost of this.

Thank you.

Best regards,

Customer
