VeryUtils has eCommerce Solutions. We can help you build your Amazon, eBay, Souq style retail mall.

What is a multi-vendor marketplace?
A platform that connects buyers and sellers/suppliers in one place is called a marketplace. A traditional e-commerce store is just the owner and the customer.

But in the online marketplace, there are several other entities:
* Market owner
* Supplier/Supplier (in case of B2B)
* customer
* Logistics and warehouse managers (if it is a large market)
* Shipping provider

There are others, like a dispute manager (in the case of refunds and returns).

How to create an online marketplace?
Based on the previous discussion, you might imagine "creating an online marketplace is not an easy task, right?". Well, not really.

Thanks to open source and free e-commerce platforms, building a marketplace has become easy, such e-commerce platforms are include: Magento, WooCommerce, Shopify, Opencart, PrestaShop, Shopware, etc.

Selling online not only increases your sales, it also helps retailers or suppliers build ongoing relationships with customers, providing them with a seamless buying experience from anywhere, including web and mobile.

B2B Commerce

The basic concept of a B2B marketplace is to provide a platform for manufacturers and retailers to easily sell or buy products in bulk.

B2B e-commerce market development must have some key features like price list, quotation system, sales agent, communication system and most importantly some trusted sellers.

How does an e-commerce platform work?
A robust e-commerce marketplace allows suppliers to register on your store. Once you approve the supplier's request, they can easily manage their products and start selling. Suppliers can manage their products, view customer reviews, view wish lists, subscribe to newsletters, maintain their profiles, and more. In addition, there is a flexible commission system. VeryUtils platform has these functions, you can register and try these functions.
