

VeryUtils Image Crop and Upload using jQuery with PHP Ajax. Uploading images is a common feature in web applications, but the size of the images uploaded by the users may not always be suitable for the application. To overcome this issue, the concept of **image cropping** comes into play. Image cropping is a process of reducing the size of an image by selecting a portion of it and discarding the rest. This not only reduces the size of the image but also makes it look better when it is displayed on the application. In this article, we will be discussing the Image Crop and Upload script in jQuery, Ajax and PHP that has been created by **VeryUtils**.
