

VeryUtils StampPDF Batch Command Line supports High Volume Stamping and Customization of PDF Files.

Does your company need to add watermark to a large number of PDF documents in an unattended or server environments? if yes, StampPDF Batch Command Line software is a good choice to you. With StampPDF Batch Command Line software, you can add custom text, images, watermarks, etc. elements to PDF documents in a batch processing mode.

<https://veryutils.com/pdf-stamper-command-line>

StampPDF Batch Command Line software is used in many industries, including:

- by manufacturers for document processing;
- by publishers for pre-publication review;
- by law firms to add Bates numbering;
- by Government agencies and Courts to certify electronic submission date and time, as part of a Social DRM process;

- by any organization that needs to dynamically personalize documents;
- and more.

StampPDF Batch Command Line is a powerful server-based application designed for high-volume, unattended and mission-critical on-demand environments.

VeryUtils StampPDF Batch Command Line features:

- * Stamping & Watermarking with StampPDF Batch Command Line software.
- * Apply copyright notices, disclaimers or other text in your choice of font, point size and color.
- * Place multi-line stamps, specify lines, line-breaks, precise location and rotate text stamps to any angle.
- * Stamp JPEG, TIFF or PDF files; resize, scale and position them precisely.
- * Specify transparency level for stamped text or images.
- * Automatic placement based on page size.
- * Automatic placement based on page diagonals; for example, top-left to bottom-right.
- * Remove stamps that are no longer needed as documents move through the workflow.
- * Autoscale Text Size to fit to the page size, by percentage of the page size.
- * Use over 30 built-in stamping variables, including file and path name, document information, page, Bates numbers, and date and time in a variety of formats.
- * Apply consecutive Bates numbering across multiple files.
- * Stamp invisible text on documents (invisible text can be indexed by search engines).
- * Supports Unicode.
- * Supports TrueType and OpenType fonts.
- * Supports Chinese, Japanese and Korean (CJK) fonts.
- * Includes new document information, including title, subject, keywords, date or other metadata, in PDF document Information fields and in XML via the eXtensible Metadata Platform (XMP).
- * Apply 40-bit or 128-bit file encryption to your stamped documents using owner and user passwords to control access and ability to modify the document.
- * Supports 256 bit AES security.
- * Linearize PDF files for network and web-server deployment via Fast Web View.

- * Optimize output files to reduce file size.
- * Maintain the same PDF version number as the input file.
