URL Shortener Without Database PHP Script

© **VeryUtils.com**

One of the key features of this script is its simplicity. It has a user-friendly interface that makes it easy for users to create and manage short URLs. Users simply need to enter the long URL that they want to shorten, and the script will generate a short URL automatically. The generated short URL can then be shared with others through social media, email, or any

other platform.

Another key feature of this script is its customization capabilities. Users can easily customize the generated short URL to their liking. They can choose a custom URL slug, add a prefix or suffix to the short URL, and even select a custom domain for the short URL. This allows users to create short URLs that are both functional and personalized.

The **VeryUtils** URL Shortener PHP script also has advanced tracking and analytics capabilities. It allows users to track the number of clicks on a short URL, as well as the location of the users who are clicking on the short URL. This information can be useful for businesses and organizations that want to track the effectiveness of their marketing campaigns.

Additionally, the script offers security features to protect users' short URLs. It includes an option to password-protect short URLs, as well as an option to set an expiration date for short URLs. This helps to prevent unauthorized access to short URLs and ensures that they are only accessible to the intended users.

Overall, the VeryUtils URL Shortener PHP script is a valuable tool for anyone who wants to easily create and manage short URLs. Its user-friendly interface, customization options, tracking capabilities, and security features make it a versatile and powerful tool for businesses, organizations, and individuals alike.
