VeryUtils Virtual Image Printer Driver is a raster virtual printer driver that creates JPEG, PNG, TIFF and PDF files from any Windows application. It works like a standard printer driver. Simply "print" the document (EXCEL, PDF, POWERPOINT, TEXT, WORD, etc.), selecting our Image Printer Driver from the print menu and an TIFF (single or multipage, most compressions, b/w or color levels), a standard JPEG or a PDF file is created.

With optional modules you can also:

- Output to JPEG, PNG, GIF, BMP, TIFF, PDF, Postscript, PCL, EPS etc. formats.
- Use different TIFF Compressions (including CCITT Group 3, CCITT Group 4, LZW, ZIP, Packbits, JPEG, etc.).
- Support various PDF security options, include 128bit and 256bit RC4 and AES encryption algorithms.

The Image Virtual Printer Driver can be used to convert proprietary graphics formats; any file, any format that can be printed in Windows can be converted to a graphic file or PDF file or other formats.

Batch processing is possible in many cases with OLE Automation or with your own application.

The Virtual Image Printer Driver is a standalone application, it doesn't require any third party products. It installs in less than 10 seconds and the performance is 3-4 times faster than similar image printer drivers.

VeryUtils Virtual Image Driver is a native program; the output DataStream is created directly, not via an indirect graphics conversion, hence the remarkable performance and high system reliability.

The TIFF and JPEG files have a complete tag set and are format compliant with the strictest industry standards. The PDF are build according to the latest valid specifications.

If you wish add any customized functions based on VeryUtils Virtual Image Printer Driver software, please feel free to contact us, we are glad to assist you asap.
