

Dear Sir and Madam,

we're currently evaluating a programmable customizable virtual PDF printer and stumbled upon your product in the process.

Our plan is to work with the basis and add some features if necessary, as well as bundle the printer with our own product to process the created documents in our software solution.

We came across some questions in the evaluation process that are important to us:

- Can the filename be defined without restrictions?
- Can the export (path /format) set freely?
- Is there a (program) event when the printing process is finished?
- PDF is the default case?
- Is the printer compatible to all current (Windows) OS?
- This is crucial to us: can the printer also be used via network / Citrix and Remote Desktop Protocol?
- Licensing: we imagine that there is a one time payable option or a royalty free version (paid annually, but not per customer) - is that correct?
- Is there a trial version?

If you could provide some information to us about those topics you'd help us a lot in our validation process!

Best regards and thank you in advance!
